Document Information

About This Manual

This manual covers the supervisor-tier actions on the **Admin Portal** — the workflows that are reserved for roles with approval authority and office-management responsibility.

Portal address: <https://nibonline-admin.nib-bahamas.com>

Who should read this:

- Customer Service Department Head (**DEPARTMENT HEAD CS**)
- Family Island Unit Manager (**MANAGER FIU**)
- Family Island Unit Sub-Office Manager (**SUB OFFICE MANAGER FIU**)
- Family Island Unit Supervisor (**SUPERVISOR FIU**)
- Customer Service Supervisor (**SUPERVISOR CS**)
- OHSU Department Head (**DEPARTMENT HEAD OHSU**)
- Registration Supervisor and Department Head (**SUPERVISOR R** , **DEPARTMENT HEAD R**)

What you'll learn:

- Everything in the **Admin Manual** is a prerequisite — please skim that first if you haven't.
- How to **approve** an application
- How to **deny** an application with the correct reason
- How to **reassign** an application from one officer to another
- How to change the **local office** handling an application
- How to **generate official forms** (B80, B81, etc.) as PDFs
- The complete **role reference** showing which roles can do what
- How the office-scoping model affects what each role sees

Prerequisite reading: If you've never used the admin portal before, read the Admin Manual first. This document assumes you can already sign in, find an application, open the detail page, download documents, and request re-uploads.

1. Quick Reference — What You Can Do

Your role determines exactly which buttons show up on an application's detail page. The table below summarizes:

Action	Cards roles that can do it	Claims roles that can do it
Route To Me	All roles with cards access	All roles with claims access
Reassign / Re-route	MANAGER FIU , SUB OFFICE MANAGER FIU , SUPERVISOR R , DEPARTMENT HEAD R	DEPARTMENT HEAD CS , MANAGER FIU , SUB OFFICE MANAGER FIU , DEPARTMENT HEAD OHSU
Request Reupload	All roles with cards access	All roles with claims access
Approve	SUPERVISOR R , DEPARTMENT HEAD R , MANAGER FIU , SUB OFFICE MANAGER FIU	DEPARTMENT HEAD CS , MANAGER FIU , SUB OFFICE MANAGER FIU , DEPARTMENT HEAD OHSU
Deny	(Same as Approve)	(Same as Approve)
Change Local Office	(Same as Approve) — and only while application is un-routed and status=Pending	(Same as Approve) — and only while application is un-routed and status=Pending
Generate Pdf	All roles with cards access (the system produces the appropriate PDF for that application's type)	All roles with claims access
View Dashboard Statistics	(varies by deployment)	(varies by deployment)

Notice: **claims and cards have different supervisor matrices**. For example, **DEPARTMENT HEAD CS** can approve claims but cannot approve cards (because cards live in the Registration department). **MANAGER FIU** can approve both. This is intentional — see §6 for the full role reference.

If a button you expect to see is missing, it's almost always because your role doesn't include that permission. Double-check the role table before assuming there's a bug.

2. Approving an Application

Before you can approve, the application must be **routed to you** (or to someone you have authority to act on behalf of). If it isn't, see §4 (Reassignment).

To approve:

1. Open the application detail page from the queue
2. Confirm the **Routed To** field shows your name
3. Review all the claimant's details, documents, and contact information one more time
4. Click the **Approve** button (top right of the detail page)
5. A confirmation dialog appears asking you to verify the action
6. Click **Confirm Approval**

What happens next:

- The application status changes to **Approved**
- The activity log records your approval with a timestamp
- The citizen receives an automatic approval email
- For **claims**, downstream payment scheduling picks up the approval (handled outside this portal)
- For **cards**, the next status is typically **Ready for Pickup** — the card is printed at the central registration office and shipped to the citizen's local office for collection

Approve is final. There is no undo button. If you approve in error, contact NIB IT — the database state can be amended but the action will be visible in the audit log permanently.

When NOT to approve

- The Routed To officer is someone else who's still working on the application
- A document is unreadable or expired (request a re-upload first)
- The claimant's banking details don't match what was uploaded (request a re-upload of the banking doc)
- The application has a **Reupload Requested** status (the citizen still needs to respond)
- You're uncertain about eligibility — escalate to your department head

3. Denying an Application

To deny:

1. Open the application detail page
2. Confirm Routed To = your name
3. Click **Deny** (next to the Approve button)
4. A dialog appears with a **denial reason** dropdown — choose the appropriate reason
5. Optionally add free-text notes
6. Click **Confirm Denial**

What happens next:

- Status changes to **Denied**
- Activity log records your denial + reason + timestamp
- Citizen receives an automatic denial email that includes the reason from the dropdown
- The citizen can contact NIB if they want to challenge the denial

Denial reasons

Common reasons (the exact list may vary by application type):

Reason	When to use
Insufficient contributions	Claimant doesn't meet the contribution requirements for the benefit
Eligibility period not met	Claim filed too early or too late relative to the qualifying event
Missing or invalid documents	Required documents are still missing or fundamentally wrong (after re-upload attempts)
Duplicate application	This citizen has already submitted (and possibly received) the same benefit
Not currently employed	(Unemployment) Claimant doesn't appear to have ceased employment
Self-employed	(Some benefits) — <i>as of 2026-Q2, self-employed claimants are soft-denied with instructions to visit their local office for in-person processing. See §3.1.</i>
Other (with notes)	Specific to the case; explain in the notes field

3.1 Self-employed soft-denial (planned policy)

Coming soon (target: mid-2026): Self-employed claimants will be flagged automatically and shown a special soft-denial message asking them to visit their local NIB office for in-person processing. Until the automation is in place, deny manually with the “Self-employed” reason and add a note pointing them to their local office.

This is being implemented as part of OHSU-led policy alignment. Watch for an internal announcement.

4. Reassigning an Application

Use reassignment when an application is routed to the wrong officer — for example, the officer is out of office, the workload needs balancing, or the application should belong to a different department.

To reassign:

1. Open the application detail page
2. Click **Reassign** (or the “Routed To” field, if the button is named differently in your portal version)
3. Choose the new officer from the dropdown
4. Confirm

What happens:

- The Routed To field updates immediately
- Activity log records who reassigned, from whom, to whom, when
- The previous routed-to officer may receive a notification (depending on environment configuration)

Removing an assignment

If you want to “un-claim” an application (return it to the unrouted pool):

1. Open the application detail page
2. Click **Remove Assignment** (icon next to the Routed To field)
3. Confirm

The application now has no Routed To and any officer in the appropriate scope can claim it via Route To Me.

Reassigning DOES NOT remove the original officer's audit history. Their prior actions (re-upload requests, document downloads, etc.) remain in the activity log. You're just changing who currently owns the work.

5. Changing the Local Office

If an application landed on the wrong office (e.g., the citizen entered the wrong office during registration, or they've since moved), this *may* be possible to fix from the application detail page — but the feature is narrowly gated.

Important — when this is available: the Local Office dropdown is **only enabled** when ALL three conditions are true:

1. You hold a **canEdit** role (manager-tier — see §7.3)
2. The application has **not** yet been routed to any officer (Routed To is empty)
3. The application's status is **Pending** (brand-new submission, not yet in review)

In practice, that means you can change the local office on a freshly-submitted application before anyone claims it, but **once an officer routes the application to themselves, the dropdown becomes read-only**. This is by design — once review has started, an office change would orphan the activity log.

If you find an application that needs to move offices *after* someone has routed it, the workflow is:

1. Ask the current routed-to officer to **Remove Assignment** (un-route it) — or, if you have reassignment rights, do it yourself
2. Once the application is back in the unrouted pool with status Pending, the Local Office dropdown will enable
3. Choose the correct office and confirm
4. The application moves to the new office's queue

If you expect to see the dropdown enabled and it isn't, check the three conditions above first. If all three are met and the dropdown is still greyed out, contact NIB IT — there may be a role/permission mismatch.

Changing the local office DOES NOT automatically reassign the Routed To officer. The previous officer's audit history remains in the log; the application simply moves to the new office's queue.

6. Generating an Official Form (PDF)

Both **claims** and **card** applications have a **Generate Pdf** action on the application detail page (in the Application Documents section header, next to **Request Reuploads**).

How it works:

1. Open the application detail page
2. Click **Generate Pdf**
3. The system automatically produces the appropriate official PDF(s) for that application type — pre-filled with the citizen's submitted data plus reference data from Oracle
4. The file downloads to your computer

You do **not** choose between B80 / B81 / etc. — the system selects the right form(s) based on the application's type:

Application type	What the PDF contains
Unemployment claim	B80 (Employer's Certificate of Termination) template pre-filled
Sickness / Maternity claim	B81 (Medical Certificate) template pre-filled
Other claim types	The form(s) that NIB Customer Service has configured for that benefit type
Card application	A printable application summary suitable for the registration office workflow

You can print, attach, or save the generated PDF as needed.

Empty fields are not errors. If the citizen didn't provide a required field (e.g., "last employer NIB number" on Unemployment), the form displays a fallback like *"See attached B80 — Employer's Certificate of Termination"*. This is per NIB Customer Service policy (Adena Minus, 2026) — the B80 in the uploaded documents already carries that information so we don't ask the citizen to repeat it on the in-app form.

The PDFs are rendered server-side with WeasyPrint using Jinja2 templates. If a generation fails, take a screenshot and note the application ID — it may be a template or data issue requiring NIB IT to investigate.

7. Role Reference (Authoritative)

The admin portal uses **5 role categories** organized by department. **A user can have multiple roles** (e.g., an officer may carry both Cards and Claims roles).

Roles come from the Oracle `dbo.security_role_user` table, **not** from LDAP groups. LDAP only validates the password.

7.1 The Five Categories

Category	Suffix	What they do
Registration (R)	"...R"	Process NIB card applications
Customer Service (CS)	"...CS"	Process claims applications
Family Island Unit (FIU)	"...FIU"	Process applications from non-Nassau islands (geographic)
IT	"...IT"	View access for support; security manager has elevated access
OHSU	"...OHSU"	Occupational Health and Safety Unit — Injury Benefit claims

7.2 Verified Role Inventory

Registration (Cards):

NON SUPERVISOR R
SUPERVISOR R
DEPARTMENT HEAD R

Customer Service (Claims):

NON SUPERVISOR CS
SUPERVISOR CS
DEPARTMENT HEAD CS

Family Island Unit (cross-domain):

NON SUPERVISOR FIU (note: two spaces between SUPERVISOR and FIU)
SUPERVISOR FIU
MANAGER FIU
SUB OFFICE MANAGER FIU

IT (cross-domain):

NON SUPERVISOR IT
SUPERVISOR IT
SECURITY MANAGER IT

OHSU (Claims – Injury Benefit only):

NON SUPERVISOR OHSU (note: two spaces between SUPERVISOR and OHSU)
DEPARTMENT HEAD OHSU (note: two spaces between HEAD and OHSU)

The double-space in " **NON SUPERVISOR FIU** " and the OHSU roles is intentional — it matches the legacy Oracle data and must be preserved exactly when assigning roles. Do not "fix" the spacing.

7.3 What Each Role Can Do — Full Matrix

Role	Cards: view	Cards: approve/ deny	Claims: view	Claims: approve/ deny	Notes
NON SUPERVISOR R	yes	no	no	no	Cards-only junior officer (Registration office)
SUPERVISOR R	yes	yes	no	no	Cards supervisor
DEPARTMENT HEAD R	yes	yes	no	no	Cards department head
NON SUPERVISOR CS	no	no	yes	no	Claims CS officer (read + route, no approve)
SUPERVISOR CS	no	no	yes	no	Claims supervisor — can route + reassign, NOT approve
DEPARTMENT HEAD CS	no	no	yes	yes	Claims department head — full approve/deny
NON SUPERVISOR FIU	yes	no	yes	no	Family Island junior officer — both domains, read+route only
SUPERVISOR FIU	yes	no	yes	no	Family Island supervisor — read+route, no approve
MANAGER FIU	yes	yes	yes	yes	Family Island manager — full approve/deny on both
SUB OFFICE MANAGER FIU	yes	yes	yes	yes	Sub-office manager — full approve/deny on both
NON SUPERVISOR IT	yes	no	yes	no	IT support — view-only
SUPERVISOR IT	yes	no	yes	no	IT supervisor — view-only
	yes	no	yes	no	IT security — view-only

Role	Cards: view	Cards: approve/ deny	Claims: view	Claims: approve/ deny	Notes
SECURITY MANAGER IT					
NON SUPERVISOR OHSU	no	no	yes	no	OHSU staff — claims read+route for injury benefits
DEPARTMENT HEAD OHSU	no	no	yes	yes	OHSU dept head — full approve/deny

Important: **SUPERVISOR CS** does **not** have approve/deny rights for claims. Only **DEPARTMENT HEAD CS** does. If your team needs a supervisor to be able to approve claims, request the **DEPARTMENT HEAD CS** role from NIB IT.

7.4 Office Scoping

Your role also determines which offices' applications you can see:

Role	Office scope
CS Non-Supervisor	Their local office only
CS Supervisor	Their local office only (cannot approve, but full visibility within office)
Department Head CS	All offices (nationwide for claims)
FIU Non-Supervisor	Their Family Island office only
FIU Supervisor	Their Family Island office only
Manager FIU	All Family Island offices
Sub Office Manager FIU	Their sub-office only
Registration roles	All Registration offices (cards are centrally processed)

A pending policy update from NIB Customer Service (Adena Minus, 2026) is to widen the CS team's visibility so they can process claims from any office regardless of local-office assignment. Watch for the announcement.

8. The Dashboard / Statistics

The **Dashboard** tab in the top nav is where aggregate statistics for your scope render. Depending on your role and current deployment, you may see widgets such as:

- Pending review count (in your scope)
- Applications routed to you
- Approval / denial counts for the current period
- Average processing time

Department Heads see office-wide stats. Managers see Family Island Unit stats. CS Officers see their own caseload.

The dashboard statistics view is being expanded as part of the post-launch initiatives. If you need specific reports that aren't visible, contact NIB IT to request them.

9. The Activity Log — Audit Trail

Every action you take (approval, denial, reassignment, local-office change, etc.) is logged with a timestamp and your username. The activity log on each application's detail page is the **regulatory audit trail** — not just a UI convenience.

When acting:

- Be deliberate. Every action is permanently recorded.
- Use notes fields where available — your reasoning can help others (including future you) understand the action months later.
- If you take an action you regret, do NOT try to hide it. Contact NIB IT to amend the database state if needed; the original action remains in the log.

When reviewing:

- Always read the activity log before approving or denying.

- The log may show that a previous officer requested a re-upload that the citizen is still working on.
- The log may show that a different department head previously denied — escalate to determine if anything has changed.

10. Common Issues

Issue	What to do
The Approve button isn't showing	Either you're not the Routed To officer, OR your role doesn't include approve rights for this application's domain. Cross-check the role matrix in §7.3.
I approved by mistake	Contact NIB IT. The action is permanent in the log; the database state may be amendable but not the audit trail.
The denial reason dropdown is empty	Refresh the page. If still empty, this is a known SPA bug — contact NIB IT.
Reassign dropdown doesn't show the officer I want	The officer may not have the appropriate role for this domain, OR they're in a different local office than this application.
I want to see ALL offices' applications, not just mine	Your role's office scope (see §7.4) limits visibility. If you should have nationwide access, request a role upgrade through your department head.
PDF form generation returns an error	Take a screenshot, note the application ID, and report to NIB IT. WeasyPrint requires the GTK runtime; corrupt or missing data in the citizen's submission can also fail rendering.

11. Need Help?

- **Role assignment requests** (e.g., "I should be able to approve cards but I'm getting Route To Me only"): submit through your department head, who can request changes to the `dbo.security_role_user` Oracle table from NIB IT.
- **Policy questions** (e.g., "Can self-employed claimants apply?"): contact NIB Customer Service leadership or OHSU. Some policies are still being worked out and the portal will be updated to reflect them.

- **A bug in the admin portal:** report to NIB IT engineering. Include the application ID, your role, your action, and a screenshot if possible.
 - **Compliance / audit questions:** the Activity Log on each application is your starting point. NIB IT can extract activity-log reports across applications if needed for compliance review.
-

Document Information

Title: NIB Online Portal — Supervisor Manual **Audience:** Department Heads, Managers, and Supervisors (canEdit-tier roles) **Version:** 1.0 **Issued:** 2026-05-20 **Published by:** National Insurance Board of The Bahamas

This manual covers the supervisor-tier workflows. For basic admin operations (sign-in, queue, review, route, document download, re-upload requests, activity log), please refer to the [Admin Manual](#).

The role matrix and office scoping in §7 are derived from the live system configuration as of the issue date. If new roles are added or canEdit policies change, this manual will be re-issued.
