

Admin Manual

How NIB staff use the Admin Portal to review and process the applications citizens submit through the online portal.

Portal: nibonline-admin.nib-
bahamas.com

Auth: LDAP **Version:** 1.0 **Issued:** 2026-05-20

About this manual

This manual covers how NIB staff use the Admin Portal to review and process the applications citizens submit through the online portal.

Who should read this:

- Customer Service Officers

(NON SUPERVISOR CS)

- Family Island Unit non-supervisor staff

(NON SUPERVISOR FIU)

- IT support staff

(NON SUPERVISOR IT

SUPERVISOR IT

SECURITY MANAGER IT)

- OHSU non-supervisor staff

(NON SUPERVISOR OHSU)

- Anyone who needs to route applications, review documents, and request re-uploads

If you can approve or deny applications, you have a supervisor-tier role.

Please read the [Supervisor Manual](#) instead, which covers the additional approve / deny / reassignment workflows.

What you'll learn:

- How to sign in with your LDAP credentials
- How to navigate the application queue
- How to open and review an application's details

- How to download supporting documents
- How to route an application to yourself so you can work on it
- How to request a document re-upload when something is missing or unreadable
- How to read the activity log for any application

What this manual does NOT cover (those are in the Supervisor Manual):

- Approving applications
- Denying applications (with denial reasons)
- Re-assigning applications to other officers
- Changing the local office handling an application
- Generating official PDF forms (the MED 1 / MED 2 medical forms, the unemployment and retirement forms, etc.)
- Office-wide / department-wide statistics

If you have questions this manual doesn't cover, ask your supervisor or contact NIB IT.

1. Signing in

Open `nibonline-admin.nib-bahamas.com` in your browser. You'll land on the admin login screen.

What you need:

- Your **LDAP username** (the same one you use for other NIB internal systems)
- Your **LDAP password**

The admin portal authenticates against the corporate LDAP directory. After your password is verified, the system looks up your assigned **admin roles** to determine what you're allowed to do.

If LDAP works but you get a "no permission" toast

Your account doesn't yet have an admin role assigned. Ask your department head to request the appropriate role from NIB IT.

LDAP password doesn't work?

Contact NIB IT. The admin portal does **NOT** have a self-service password reset.

2. The Applications Hub

After signing in, you land on the Applications hub, a chooser for the two application domains you can work in.

Two large cards represent the two domains:

- **Online Card Renewals:** Search and manage online card renewal applications.
- **Claims:** Search and manage online claim applications.

Click whichever card matches the work you need to do. The top nav has **Dashboard** and **Applications** tabs; you can also click your name in the top right to sign out.

Your hub may show the Cards card, the Claims card, both, or neither depending on which roles you have. For example, OHSU staff only see Claims (they handle Injury Benefit claims). Cards Registration staff only see Cards.

3. Finding an application

3.1 The Claim Applications queue

If your role gives you access to Claims, click **Claims** from the hub. The queue shows applications matching your filter. The header shows the result count (e.g., "Results found: 71") and the table lists:

COLUMN	MEANING
Application ID	Internal unique number for the application
NI Number	The citizen's NIB number
First Name / Last Name	The citizen who submitted the application
Application Type	The benefit type (Sickness, Unemployment, Maternity, etc.)
Status	Where the application is in the workflow
Local Office	Which NIB office is handling it
Inserted Date	When the citizen submitted it

Click any row to open that application's detail page.

3.2 The Card Applications queue

If your role gives you access to Cards, click **Online Card Renewals** from the hub. Same filter form, different result columns. Application Type values will be **Renewal** or **Replacement**.

3.3 Using filters

Both queues share the same filter form at the top:

FILTER	WHAT IT DOES
Application ID	Find one specific application by its internal number
NI Number	Find all applications from one citizen
First Name / Last Name	Search by claimant name
Application Type	Limit to one benefit / card type
Status	Pending, Approved, or Denied (these are the only three filter options)
Routed To	Filter by which officer owns it (see Section 4.3 about routing)
Local Office	Filter to one office (your access may be limited to your own office)
From / To Inserted Date	Date range when the citizen submitted

Click **Search** to apply your filters, or **Clear** to reset.

3.4 What you see depends on your role

By default:

- **NON SUPERVISOR CS**
and
NON SUPERVISOR FIU :
see only applications routed to your local office
- **IT roles** :
see all applications (read-only view)
- **NON SUPERVISOR OHSU** :
see Injury Benefit claims

If you expect to see an application but don't, check the filters first. If filters are clear and you still don't see it, your role may not include that office's scope. Ask your supervisor.

4. Reviewing an application

Click any row in the queue to open the application detail page.

4.1 Claim application detail

The detail page is organized into sections:

1. **Header:** claim type and claim number (e.g., "Unemployment Claim #1") with a status badge (e.g.,

Pending

2. **Routed To:** which officer currently owns this application (or empty if not yet routed)
3. **Claimant Details:** the citizen's name, NI number, email
4. **Payment:** how the benefit is to be paid, shown read-only: the **Payment Method** (Bank Account, Funeral Home, or Local Office) and its supporting details. When the method is a local office, the field is labelled **Payment Collection Office**, the office where the citizen collects payment. This is not the same as the processing office shown in the address section; don't confuse the two.
5. **Claim-specific Details:** fields specific to this benefit type (for Unemployment: last working date, employer info, pension status, severance days, vacation days, etc.)
6. **Application Documents:** uploaded files (passport, B80, etc.) with **Download, Upload History**, and additional document-action links (see [Section 4.5](#))
7. **Contact Information:** phone numbers and primary contact flag
8. **Application address Information:** the citizen's mailing/physical address
9. **Activity Log:** audit trail (scroll to the bottom)

4.2 Card application detail

A card detail page has a similar structure with cards-specific sections:

- **Person Information:** full name, NI Number, Registrant Type (Bahamian / Non-Bahamian), gender, DOB, country of nationality, marital status
- **Application Information:** application type (Renewal / Replacement), reason for name change (if applicable), Ready for Pickup flag, Local Office
- **Non-Bahamian Details:** (only for non-Bahamian registrants) permanent-resident flag, resident card number + expiry, work permit number + expiry
- **Application Documents:** R4, Passport, Work Permit, etc.
- **Contact Information and Address Information**

4.3 Routing: claiming an application to work on

Most actions in the portal require an officer to be the **Routed To** owner of the application. When you find a new application in the unrouted pool, claim it by clicking **Route To Me**.

After you click Route To Me:

- The **Routed To** field now shows your name
- You're notified by the system if other officers try to act on the application
- You can take any further actions allowed by your role

If an application is already routed to someone else, you can still:

- Review its documents and details
- Read the activity log

But to take action, you need to either:

- Ask the current routed-to officer to hand it off (they can re-assign if their role allows, see Supervisor Manual)
- Or escalate to a supervisor who can re-assign on your behalf

4.4 Downloading documents

Each uploaded document in the **Application Documents** section has a **Download** link. Click it to retrieve the file (PDF, JPG, PNG) to your computer.

The download is served directly from the file storage shared between the citizen portal and the admin portal, the file you download is the same file the citizen uploaded. There's no copy / transfer delay.

If a document fails with "400: File does not exist"

Do **NOT** ask the citizen to re-upload. Take a screenshot of the error and notify NIB IT, there may be a database / file-path issue that needs engineering attention. Asking the citizen to re-upload often masks the underlying problem.

4.5 Requesting a document re-upload

If a document is unreadable, blurry, incomplete, expired, or the wrong document type, you can ask the citizen to upload a replacement.

Click **Request Reuploads** in the Application Documents header. You'll be prompted to:

1 Select which document(s) need a new upload

2 Choose a reason from the fixed list (one reason per request): **Image quality is poor**, **Bank Client Card / Bank Letter Needed** (paper card with bank account info and transient number), **Claim is not signed**, **Claim is not stamped by Doctor**, or **Revised dates needed**. A reason is required; there is no free-text "Other" option.

3 Confirm the request

After you confirm:

- The document is marked as **awaiting re-upload**
- The citizen receives an automatic email letting them know
- The citizen sees a banner / prompt on their portal home and "My Claims" / "Card Applications" list the next time they sign in
- The application's overall status reflects that it's waiting on the citizen

When the citizen uploads a replacement, the document returns to its normal submitted state, and you'll see the new file when you next open the application. You can then continue your review.

5. The Activity Log

Every significant action taken on an application is logged with a timestamp and the officer's identity. Scroll to the bottom of the application detail page to find the Activity Log.

The log records:

- Routing changes (who routed it, when, who claimed it)
- Re-upload requests (which document, the reason, who requested)
- Document downloads

- Status changes

(Submitted

→

In Review

→ etc.)

- Approval / denial (when applicable)
- Local-office changes

You can filter the log by date range or activity type if it's long.

This is a regulatory audit trail, not just a UI feature.

It's stored permanently in Oracle and used for NIB compliance reporting. Do not attempt to bypass it; every action you take should be visible in the log so others can follow what happened.

6. Common tasks

Find a specific citizen's application

Use **NI Number** in the queue filter. This is faster than scrolling. If you don't know the NI number, search by Last Name + First Name.

Find work you're currently handling

Click the **Routed To** filter field to open the officer picker, then select your name. This shows your active workload.

Check what's been recently submitted

Set **From Inserted Date** = today (or yesterday). Leave the To date blank. Sort by Inserted Date if needed.

Read the audit history before acting

Always check the Activity Log at the bottom of the detail page before requesting a re-upload or asking for guidance. The log may show that another officer already requested a re-upload, or that the citizen has already responded to a prior request.

7. Common issues

ISSUE	WHAT TO DO
I can't sign in, LDAP rejected my password	Contact NIB IT to reset your LDAP password. The admin portal has no self-service reset.
I signed in but see a "no permission" toast	Your LDAP account doesn't have an admin role. Ask your supervisor to request the role from NIB IT.
I can see the application but can't approve / deny	Approve / deny is reserved for supervisor-tier roles. Either escalate to your supervisor, or check the Supervisor Manual to confirm whether your role should have access.
An expected application isn't showing in the queue	Clear all filters and re-search. If still missing, the application may be assigned to a different local office (you only see your office by default). Ask your supervisor to widen the search or check Routed-To.
A document download returns "400: File does not exist"	Don't ask the citizen to re-upload. Screenshot and report to NIB IT.
I can't find an officer in the Routed-To filter	The Routed-To filter opens an officer-picker modal. Click the field to open it and choose from the list. If you still can't narrow it down, use NI Number or claimant-name search instead.
Filter shortcuts on the queue aren't applying	Known issue at time of writing. Use the dropdown filters manually.

8. Need help?

- **LDAP / sign-in issues:** Contact NIB IT helpdesk.
 - **Role assignment requests** (e.g., "I should be able to approve but the button isn't showing"): submit through your department head, who can have NIB IT update your admin role assignment.
 - **A bug in the admin portal:** Report to the engineering team. Include the application ID, your username, and a screenshot if possible.
 - **A specific application's data looks wrong** (e.g., "Why isn't the banking doc showing?"): the engineering team can run database queries to investigate.
